Updated 3/3/2025

This document is neither a solicitation to buy nor an offer to sell securities, and it is not intended as investment advice. Information contained herein reflects our judgment or interpretation at the time of publication and is subject to change without notice. This information, including gross historical performance, pertains solely to the theoretical *model portfolios* published by Sabrient Systems LLC. Sabrient is not responsible for the usage of such portfolios by any third party, including without limitation the *Baker's Dozen* UITs sponsored by First Trust. In addition, the performance numbers herein do not reflect the deduction of brokerage commissions, execution fees, or other expenses that may be paid by any third party making its own investment in the portfolios. First Trust UITs are subject to fees, NAV on purchase date, and variations in construction of the portfolios, which may over time reduce performance of such UITs in comparison with the performance of Sabrient's model portfolios.

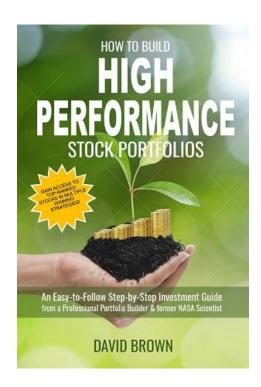

Summary Talking Points

- 1. Sabrient leverages a **process-driven methodology** developed by former engineers and forensic accountants to build quantitative, fundamentals-based, multifactor models and a "quantamental"(quantitative screen plus fundamental review & selection) approach. Sabrient founder **David Brown unveils it all in his new book**, **How to Build High Performance Stock Portfolios** (on **Amazon**).
- 2. The vast majority of Sabrient portfolios created **since major process enhancements** were implemented in December 2019 have outperformed or stayed close to their benchmarks (gross total return), despite narrow market breadth dominated by the Big Tech megacaps that have made the cap-weighted S&P 500 (SPY) hard to beat. Portfolios include:

 Baker's Dozen, Dividend, Small Cap Growth, and Forward Looking Value.
- 3. The latest **Q1 2025** *Baker's Dozen* launched on 1/17 with 13 concentrated positions across large/mid caps (7/6) and with a 5/8 split between value/growth. It offers the potential for outsized gains—for example, the <u>Q1 2024 portfolio is up +78%</u> thru 2/28 (see slide 13).
- 4. The annual **Forward Looking Value 12** launched on 7/31. It is a <u>less-concentrated and more value-oriented</u> version of our *Baker's Dozen*.
- 5. The latest **Small Cap Growth 45** launched on 1/22. It provides an <u>alpha-seeking alternative</u> to a passive position in the Russell 2000 for small-cap exposure as business-friendly fiscal policies and a supportive Fed create lead to better market breadth.
- 6. The latest **Dividend 51** launched on 2/11. It employs a <u>GARP & Income strategy</u> that seeks capital appreciation from quality companies with a solid growth history and reliable dividends. It pays a current yield of 3.7%.
- 7. A key proprietary alpha factor is our Earnings Quality Rank (EQR), an accounting-based risk assessment signal used in all our portfolio strategies. It is also licensed as a prescreen to the **First Trust Long-Short ETF (FTLS)**, an absolute return portfolio.
- 8. Stocks have long displayed **extreme divergences** in Large over Small-Mid Caps, Growth over Value, and the Tech sector over all others. But this is changing with lofty valuations and Trump 2.0 policies, so the market should continue to broaden into other market segments.
- 9. Rather than the passive cap-weighted indexes dominated by Big Tech, **investors may be better served by active stock selection** that seeks to identify under-the-radar and undervalued gems primed for explosive growth. <u>This is what Sabrient seeks to do in our various portfolios</u>, all of which provide exposure to Value, Quality, Growth, and Size factors and to both secular and cyclical growth trends.

David Brown's new book on his Investing Strategies

Sabrient founder David Brown's new book, *How to Build High Performance Stock Portfolios*, is now available on Amazon.com. Here is the link to buy:

https://www.amazon.com/dp/B0DGWCJGR1

(or simply paste that final identifier code into the search on your Amazon mobile app)

David has written a number of other books through the years. In this one, he describes his path from NASA engineer on the Apollo 11 moon landing project to building quant models for stock rankings. But the book's main goal is to share David's approach to creating stock portfolios for **four key investing styles—Growth**, **Value**, **Dividend**, **and Small Cap Growth**—which serve as the underlying strategies for Sabrient's *Baker's Dozen*, *Forward Looking Value*, *Dividend*, *and Small Cap Growth* portfolios.

Our "Next-Gen" Sabrient Scorecards:

You also are invited to access the next generation of our "Sabrient Scorecard for Stocks," which provides a weekly Top 30 stocks list for each of those four key investing strategies (using their underlying quant models). You can also paste your own list of tickers on the Score Your Own Stocks tab to monitor their alpha-factor scores.

I invite you to take advantage of the Free Download offer for the stock scorecard.

As a bonus, we provide a weekly "Sabrient Scorecard for ETFs" with the Top 30 ETFs based on our SectorCast Outlook Score, plus access to the Full Universe of scores for roughly 1,400 equity ETFs.

Both scorecards are quite user friendly for anyone with a basic knowledge of Excel. You can easily sort a list by a given alpha factor, or weight factors to your preferences and then sort the list by Weighted Score.

Learn more about the book and new Sabrient Scorecards at: http://DavidBrownInvestingBook.com

Market Observations & Outlook - 1/2

- 1. GDP and jobs growth have been over-reliant on government spending and its relatively inefficient use of capital compared with organic private sector growth. Inflation has ticked up lately but should soon resume its disinflationary trend. Economic indicators are weakening, unemployment is elevated (above 4.0%), and the federal debt and budget deficit have surged. Relatively tight monetary policy, rising bond yields and mortgage rates, and a strong dollar have hurt US consumers, small businesses, and the global economy.
- 2. Allowing somewhat elevated inflation in the 2-3% range might be appropriate to help "inflate away" the massive federal debt in conjunction with cutting federal deficit spending and implementing fiscal & monetary policies that support robust private sector organic growth—leading to rising productivity, margins, earnings, jobs, wages, GDP, and tax receipts (which are historically 17% of GDP no matter the tax rate). Private enterprise is much better at efficient capital allocation than government bureaucrats.
- 3. The Fed remains behind the curve despite cutting rates 100 bps. A terminal fed funds rate of 3.25-3.50% seems appropriate (vs. today's 4.25-4.50%). Bond yields surged in January (10-year at 4.8%) on investor fears of resurgent inflation and a credit crisis from massive federal debt and deficit, but the 10-year has since receded below 4.3%—signaling to the Fed cuts are needed. The US dollar remains strong, but the administration wants lower rates and a weaker dollar to support the economy, allow other central banks to inject liquidity, avert a global recession and credit crisis, and relieve indebted consumers and businesses.
- 4. Despite the pullback, lofty valuations on cap-weight indexes remain. But minus Big Tech titans, valuations are more reasonable. To illustrate, forward P/E on cap-weight Nasdaq 100 (QQQ) is 26.4x and S&P 500 (SPY) is 22.1x, but equal-weight Nasdaq 100 (QQQE) is 23.7x and S&P 500 (RSP) is 17.2x, while S&P 600 small-cap (SPSM) is just 14.4x, as of 3/3. The ratio of small cap to large cap valuations remains extreme.

Market Observations & Outlook - 2/2

- 5. Stock got a huge post-election and rally, before pulling back. But looking ahead, improving market breadth bodes well for market health. And with several trillion dollars still sitting defensively in money market funds as potential fuel, capital flight into the US, and bond credit spreads still tight, there is little sign of impending disaster despite high valuations and exuberance around Gen AI. Even if there is a larger correction, stocks still should recover to post solid gains in 2025, given business-friendly Trump policies and a supportive Fed.
- 6. At the core of an equity portfolio should be US large-cap Technology stocks, given their huge cash positions, free cash flow, margins, return ratios, and wide "moats." But as the market broadens, it should create good investment opportunities in small and mid-caps, value, quality, high-dividend, cyclical industries, and equal-weight indexes, as well as market segments like industrials, defense, transports, travel, homebuilders, banks, insurers, energy, and select materials companies. Healthcare, biotech, and REITs might be "sleepers" as well. Also, gold and bitcoin should have a place in a diversified portfolio as hedges.
- 7. Rather than investing in the passive cap-weighted indexes, which display high valuations and extreme divergences in performance and valuation, investors may be better served by active stock selection that seeks to identify under-the-radar, undervalued, high-quality gems primed for explosive growth. This is what Sabrient seeks to do in our various portfolios, all of which provide exposure to Value, Quality, Growth, and Size factors and to both secular and cyclical growth trends.

=> All of this is discussed in greater detail in our "Sector Detector" market commentaries.

Company Overview

Sabrient Systems LLC:

- Independent equity research provider and SEC-registered RIA founded in 2000
- Quantitative fundamentals-based multifactor models created by:
 - ✓ team of engineers and analysts led by founder David Brown, a former NASA engineer on the Apollo 11 moon landing project, and CEO Scott Martindale, a former Chevron engineer
 - ✓ team of forensic accounting specialists from Gradient Analytics, a wholly owned Sabrient subsidiary
- Process-driven, bottom-up methodology leveraging a scientific hypothesis-testing approach to model development
- Unlike most RIAs, we don't manage investor money directly but instead receive licensing/consulting fees

Products & Services:

- Quantitative equity research, models and data sets, rankings of stocks & ETFs, online investor tools, and insightful
 market commentaries
- Portfolio strategies for various investing styles, stock portfolios for UITs and SMAs, rules-based equity indexes for ETFs
- Best known for our *Baker's Dozen* franchise, a 13-stock portfolio first introduced in 2009 based on a proprietary Growth
 at a Reasonable Price (GARP) "guantamental" approach
- Baker's Dozen and 3 other offshoot strategies offered as UITs through First Trust Portfolios
- 8 core proprietary multi-factor models, including the *Earnings Quality Rank (EQR)*, an accounting-based risk signal
 designed by subsidiary Gradient Analytics and used internally for Sabrient portfolios. It is also licensed to hedge funds
 and to the First Trust Long-Short ETF (FTLS).

Our "Quantamental" Approach

1. Quantitative screen to narrow large eligible universe (50-100 names)

Forward P/E, forward EPS growth, recent dynamics of analyst consensus estimates, earnings quality (based on expertise of subsidiary Gradient Analytics), consistency & reliability of earnings growth

2. Fundamental analysis to identify top candidates (~25 names)

Still mainly numbers-driven, but not algorithmic

3. Final Stock Selection (13 names)

Manual process, adhering to sector concentration limits

We believe a GARP strategy is "all-weather." So, what could go wrong? Two things:

- 1) Consensus EPS estimates are reduced after portfolio launch or the company fails to achieve them.
- 2) Investor sentiment turns defensive, leading to narrow market breadth and avoidance of lesser-known firms.

Sabrient Portfolios: leveraging the "quantamental" approach

- > Q1 2025 Baker's Dozen (quarterly, 13 stocks) launched 1/17/25
 - ⇒ Our flagship product is a concentrated, all-cap, alpha-seeking portfolio that balances value/cyclical growth with high-quality secular growers.
- > Small Cap Growth 45 (quarterly, 50 stocks) launched 1/22/25
 - ⇒ Alpha-seeking alternative to the passive Russell 2000 for small cap exposure.
 - ⇒ Poised to benefit from improving market breadth and rotation to small-mid caps
- > **Dividend 51** (quarterly, 50 stocks) launched 2/11/25
 - ⇒ High-quality GARP + Income portfolio; Current Yield of 3.7%
- Forward Looking Value 12 (annual, 33 stocks) launched 7/31/24
 - ⇒ Less-concentrated and more value-oriented version of the Baker's Dozen.

Forward Looking Value - Gross return thru: 2/28/2025

Portfolio	Launch	Close	Gross Return	SPYV Return	Active
FLV 10	7/15/22	10/24/23	24.0%	12.4%	11.6%
FLV 11	7/24/23	11/4/24	20.8%	20.3%	0.6%
FLV 12	7/31/24		-1.5%	4.8%	-6.3%

The tables show <u>gross</u> total returns (without transactional sales charge, as displayed on the <u>ftportfolios.com</u> website) vs. the most relevant benchmark for all the <u>live portfolios</u> plus those that recently terminated. SPDR S&P 500 Value (SPYV) is the benchmark for Forward Looking Value and First Trust Dow Jones Global Select Dividend Index Fund (FGD) is benchmark for Dividend portfolios.

Although narrow market leadership has made SPY hard to beat, the vast majority (73%) of portfolios created since enhancements were implemented in December 2019 have either outperformed or stayed close to their benchmarks. The best performer is Q1 2024 Baker's Dozen, which is **up +77.6%** since 1/29/24 inception, compared to S&P 500's +24.7%, as of 3/3/25, illustrating the performance potential.

Worst performers were the Q4 2022 and Q1 2023 Baker's Dozens, which greatly underperformed the S&P 500 mainly due to extreme sector "tilts" away from the benchmark allocations that didn't pan out (overweight in Energy and underweight in Technology). Since then, we have avoided such sector bets.

Sabrient Dividend - Gross return thru: 2/28/2025

This portfolio is enjoying several big winners, led by 3 of the mega-cap market darlings (NVDA, META, NFLX), easily offsetting some losers. Other top performers include a mortgage servicer and a biotech (oncology).

Laggards include a networking communications firm, an auto parts company, a cloud cybersecurity provider, and 2 oil & gas services firms.

Most of the companies have met or exceeded their EPS estimates— even laggards VC and RPD, which have sold off due to reduced forward guidance.

So far, the portfolio is slightly ahead of the SPY and well ahead of the other relevant large cap, mid-cap, and small-cap benchmarks (gross total return).

This portfolio has been led by 4 big winners—most notably Al-driven marketing software firm AppLovin, as well as mega-cap market darling NVIDIA (dominant in Al chips), entertainment powerhouse Netflix, and a major cruise line.

They offset laggards from oil & gas, information management software, biopharma, retail apparel manufacturing, and auto parts.

The portfolio has outperformed all relevant large cap, mid-cap, and small-cap benchmarks including both cap-weight and equal-weight by a wide margin (gross total return).

This portfolio also illustrates the power of having a few big winners within a concentrated portfolio.

12.2%

This portfolio so far has been led by several solid winners, which have only partially offset a few big losers. Top performers are powerhouse mega-caps Netflix and NVIDIA, plus two packaged foods firms and a software infrastructure firm (that was acquired).

Laggards include companies from oil & gas, specialty chemicals, and cloud cybersecurity infrastructure.

So far, the portfolio is underperforming all its relevant benchmarks (gross total return).

SectorCast Rankings and Sector Rotation Model

Sabrient SectorCast Sector Rotation Strategy - As of 2/28/2025 Suggested Top 3 Sector ETFs for Bullish, Neutral, or Defensive Outlooks Bullish/Neutral/Defensive bias based on SPY vs. 50/200 day moving averages: 30-90-day forward look

Building reaction, Bereinstre Blad Based on St. 1 vs. 30, 200 day moving averages, 30 30 day forward look												
Sector	ETF	Outlook Score	Bull Score	Bear Score	Net Score: Neutral Bias	Net Score: Bullish Bias	Net Score: Defensive Bias					
TECHNOLOGY	IYW	94	62	43	94	90.0	55.5					
HEALTHCARE	IYH	60	46	69	60	51.6	90.0					
TELECOMMUNICATIONS	IYZ	54	53	60	54	61.5	70.7					
FINANCIALS	IYF	46	48	60	46	50.4	67.4					
CONSUMER DISCRETIONARY	IYC	40	52	54	40	55.2	53.7					
INDUSTRIALS	IYJ	40	49	59	40	50.1	63.0					
UTILITIES	IDU	38	36	68	38	27.3	79.0					
ENERGY	IYE	26	47	63	26	42.1	64.7					
CONSUMER STAPLES	IYK	17	35	74	17	18.7	81.5					
BASIC MATERIALS	IYM	8	48	62	8	37.9	55.4					

Sabrient's **Outlook Score** employs a forward-looking fundamentals-based scoring algorithm to create a composite profile of the constituent stocks. **Bull Score** and **Bear Score** are based on price behavior of the underlying stocks on particularly strong and weak days over the prior 40 market days. High Bull indicates a tendency for relative strength in a strong market, and high Bear indicates a tendency for relative strength in a weak market (i.e., safe havens). High for all scores is 100, and higher is better.

Sabrient's SectorCast rankings reflect a neutral bias, as cyclicals and secular growth sectors are spread out across the rankings. Technology (dominated by the mega-cap MAG-7) at the top, although not by as great a margin over other sectors due to its lofty valuation. However, cyclical sectors Materials and Energy remain at the bottom.

After the market pullback somewhat reduced the extreme forward P/Es, valuation multiples have been rising again on bullish sentiment as prices get ahead of earnings growth forecasts but boosted by lower interest rates. Technology still displays the highest forward P/E (27.1x, as of 3/3) but remains at the top of the rankings due to solid next-12-months EPS growth estimates (18.6%), a relatively modest forward PEG ratio of 1.46, favorable sell-side analyst earnings revisions, the highest profit margins and return ratios, and significant insider buying.

Our sector rotation model has a neutral bias (based on the SPY trading below its 50-day moving average but still above the 200-day). So, the model suggests holding Technology (IYW), Healthcare (IYH), and Telecom (IYZ).

Trends in inflation metrics

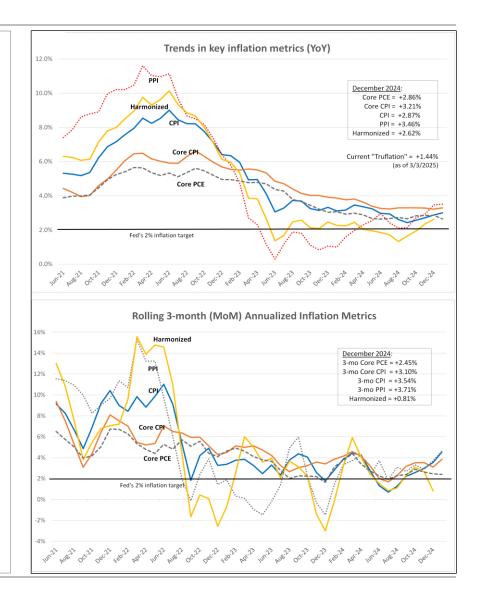

The upper chart below compares the **December** YoY metrics for CPI, Core CPI, PPI, Core PCE, and *Harmonized Index of Consumer Prices* (HICP, a European methodology). Note that January HICP was delayed, so I'm using December figures for all metrics.

HICP historically presages CPI due to its real-time bias, such as actual costs of home acquisition and maintenance expenses rather than the highly-weighted concept of "owner's equivalent rent" (OER) used in CPI, which is highly subjective (based on surveys of homeowners), and the shelter cost metrics typically have a long lag time while accounting for roughly 33% of CPI and 40% of Core CPI.

Notably, HICP shows **+2.62%** while the real-time, blockchain-based "Truflation," which is updated daily and historically presages CPI by several months, has crated down to **+1.44%** YoY (as of 3/3).

The lower chart shows annualized 3-month rolling averages to better reflect <u>current</u> inflation trends without the effects of big first-of-year resets for many services costs. For **December**, 3-month annualized Core CPI rose to +3.10% and Core PCE to +2.45%, while 3-month headline CPI was +3.54%, and PPI +3.71%. But 3-month HICP was just +0.81%. Given the sharp fall in Core PCE, HICP, and Truflation, I expect all trends to soon recede as **disinflationary trends** resume.

However, in my view, **maintaining somewhat elevated inflation might be appropriate** (in the range of 2-3%) to help "inflate away" the massive federal debt in conjunction with fiscal & monetary policies to support robust *organic* growth in the private sector—leading to gains in productivity, margins, earnings, jobs, wages, GDP, and tax receipts.
